Dr. (b)(6)

No. Neither the base PAO or the hospital PAO has been in contact. I am disappointed in the decision because what's happening at your Heat Center goes along way to explaining what the Army and DoD are doing to address heat illness and to establish a comprehensive and sustained strategy to address heat.

I appreciate your help in trying to make this happen.

I suspect that I'll be asking for a follow-up telephone interview in the next few weeks as I finalize the story and need clarification on some points we talked about as well as having a few new questions.

Again thank you for your help; and for trying to facilitate a visit.

Hello Mr. Hasemyer,

I'm not sure if our PAO office has reached out to you directly, but both BMACH and MCoE leadership have decided not to authorize the site visit at this time. Dr. (b)(6) and I are disappointed. We appreciate your interest in our initiative and perhaps we can arrange something in the spring when we're gearing up for the next heat season. Apologies for being the bearer of bad news, but I wanted to ensure you weren't wasting time and resources on planning. Thank you again for your interest!

Dr. (b)(6):

Thankyou again for your offer of an in-person visit. We, myself and the InsideClimate News video journalist, would like to make a hospital and base visit Oct. 24, 25 and 26.

Alongwith talking with you and Maj. (b)(6) we'd like to see the section of the hospital/ER/Heat Center where heat illnesses are treated. It also will be important to us to talk with some soldiers who have been treated for a heat illness; and perhaps even a soldier who was forced to leave the military because of the effects of a heat illness.

I'm also hoping you can facilitate interviews and observations of base operations where heat mitigation is an element of the preparation for training. I'm thinking that would include the base weather center, any classes where soldiers are instructed on heat mitigation; observing any meetings where heat is a part of the risk assessment equation.

We'd also like to be in the field to observe some of the training, including exercises where soldiers are in full gear, and some of the safety measures that are employed to protect against heat illness.

And just to follow-up on a couple of other earlier request, it remains important to get as many details as possible about the 2016 "preventable death of a young officer" referenced in your white paper as the genesis of the Heat Center. It would be appreciated if you could tell me more about that case; the circumstances surrounding the death, how it was preventable. And what would be different today both in terms of treating the officer and mitigating the threat.

Thankyou again for your help. This gives us the in-sight necessary to explain inreal, human terms the threat heat poses to individual soldiers as wells as tomilitary preparedness.

I'llbe away on vacation next week, but will check in with you upon my return.

Sincerely,

--

The hospital PIO, (b)(6) has been non-responsive to my multiple requests over a period of months. It was only after I made direct contact with Maj. (b)(6) that she facilitated a later telephone interview. The major later said our request for an on-camera interview had been turned down. I never heard from Mr. (b)(6) on this matter. (I would be happy to discuss with you in a phone call the long history of failed attempts to work through Mr. (b)(6))

The work being done at the heat center plays a critical role in our story in terms of explaining what the Army is doing to address heat illness and to establish a comprehensive and sustained strategy to address heat.

While the telephone interview with Maj. (b)(6) provided important insight that I'll be including in my article, we simply want to convey in the most diverse and powerful way – through video and the written word – the work that is taking place at Martin Army Community Hospital in regards to preventing heat-illnesses. An on-camera interview with Maj. (b)(6) would help highlight BMACH's critical mission.

We have scaled back our initial request to simply an interview with Dr. (b)(6) and her co-worker Maj. (b)(6) if he's available; and are ready to work through any logistical matters. The interview will be conducted by Anna Belle and will only need two hours and no more than three.

While Dr. (b)(6) has suggested making the request again next year, our story and video will be published this year. We are frankly on a deadline at this point and need to complete the interview within the next three weeks.

Please let me know if there is anything else I can do to facilitate an interview with Maj. (b)(6)

My number is (b)(6)

<https://insideclimatenews.org/author/david-hasemyer> < Caution-<https://insideclimatenews.org/author/david-hasemyer> < Caution-
 > > > . I am seeking your help in arranging anon-camera interview with Maj. (b)(6) at Fort Benning's Martin
 Army Community Hospital.

The interview is for a story I'm preparing along with video journalist Anna Belle Peevey < Caution-Caution-
 Caution-<https://insideclimatenews.org/author/anna-belle-peevey> < Caution-
<https://insideclimatenews.org/author/anna-belle-peevey> < Caution-Caution-
<https://insideclimatenews.org/author/anna-belle-peevey> < Caution-<https://insideclimatenews.org/author/anna-belle-peevey> < Caution-
 peevey > > > on how the military is addressing the issue of heat-related illnesses.

I first became aware of Maj. (doctor) (b)(6) through this Army news story: Fort Benning team determined to
 end heat-related deaths across DoD. < Caution-Caution-Caution-
https://www.army.mil/article/202458/fort_benning_team_determined_to_end_heat_related_deaths_across_dod < Caution-
https://www.army.mil/article/202458/fort_benning_team_determined_to_end_heat_related_deaths_across_dod > < Caution-

Dr (b)(6)

The work being done at the heat center plays a critical role in our story in terms of explaining what the Army and DoD are doing to address heat illness and to establish a comprehensive and sustained strategy to address heat.

While your phone interview provided me with important insight that I'll be including in my article, I haven't given up hope that we may also be able to include your voice in our accompanying video. I understand BMACH and MCoE leadership would like to postpone until next year, but our story and video will be published this year.

Perhaps scaling back our initial request to a simple on-camera interview would be more logistically acceptable to them? We would be reducing our earlier long list request of meetings, base weather station, physical training, etc. to an interview with you and perhaps Dr. (b)(6)

We simply want to convey in the most diverse and powerful way – through video and the written word – the work that is taking place at Martin Army Community Hospital that has as its goal setting the standard for treating and preventing heat-related illness. An interview with you would help highlight BMACH's critical mission.

Please consider any alternatives that would allow us in-person access.

Again your help is appreciated.

Sincerely,

Dave Hasemyer

Dr. (b)(6)

Thankyou again for your offer of an in-person visit. We, myself and the InsideClimate News video journalist, would like to make a hospital and base visit Oct. 24, 25 and 26.

Alongwith talking with you and Maj. (b)(6) we'd like to see the section of the hospital/ER/Heat Center where heat illnesses are treated. It also will be important to us to talk with some soldiers who have been treated for a heat illness; and perhaps even a soldier who was forced to leave the military because of the effects of a heat illness.

I'm also hoping you can facilitate interviews and observations of base operations where heat mitigation is an element of the preparation for training. I'm thinking that would include the base weather center, any classes where soldiers are instructed on heat mitigation; observing any meetings where heat is a part of the risk assessment equation.

We'd also like to be in the field to observe some of the training, including exercises where soldiers are in full gear, and some of the safety measures that are employed to protect against heat illness.

And just to follow-up on a couple of other earlier requests, it remains important to get as many details as possible about the 2016 "preventable death of a young officer" referenced in your white paper as the genesis of the Heat Center. It would be appreciated if you could tell me more about that case; the circumstances surrounding the death, how it was preventable. And what would be different today both in terms of treating the officer and mitigating the threat.

Thankyou again for your help. This gives us the in-sight necessary to explain inreal, human terms the threat heat poses to individual soldiers as wells as tomilitary preparedness.

I'llbe away on vacation next week, but will check in with you upon my return.

Sincerely,

--

Dave Hasemyer

All,

Thank you for looping Army public health in -- we were interviewed by the same reporter back in August for an article he is producing on preventing heat illness. The EXSUM of that engagement is attached. Also sharing two documents we sent him after the interview. The first is the Army Public Health Center's public health alert on preventing heat illness (which contains some messaging) and the second is heat injury data for Soldiers over the past few years.

I've added to the chain the hospital PAO, the regional health command PAO, and the Army Public Health PAO just in case they weren't looped in. (b)(5) I added

(b)(6) in case there was some messaging they have on heat illnesses/injury that could be useful.

*****ORIGINAL QUERY*****

Thank you again for your offer of an in-person visit. We, myself and the Inside Climate News video journalist, would like to make a hospital and base visit Oct. 24, 25 and 26.

Along with talking with you and Maj. (b)(6) we'd like to see the section of the hospital/ER/Heat Center where heat illnesses are treated. It also will be important to us to talk with some soldiers who have been treated for a heat illness; and perhaps even a soldier who was forced to leave the military because of the effects of a heat illness.

I'm also hoping you can facilitate interviews and observations of base operations where heat mitigation is an element of the preparation for training. I'm thinking that would include the base weather center, any classes where soldiers are instructed on heat mitigation; observing any meetings where heat is a part of the risk assessment equation.

We'd also like to be in the field to observe some of the training, including exercises where soldiers are in full gear, and some of the safety measures that are employed to protect against heat illness.

Adjust to follow-up on a couple of other earlier request, it remains important to get as many details as possible about the 2016 "preventable death of a young officer" referenced in your white paper as the genesis of the Heat Center. It would be appreciated if you could tell me more about that case; the circumstances surrounding the death, how it was preventable. And what would be different today both in terms of treating the officer and mitigating the threat.

Thank you again for your help. This gives us the in-sight necessary to explain in real, human terms the threat heat poses to individual soldiers as wells as to military preparedness.

I'll be away on vacation next week, but will check in with you upon my return.

Thank you for the assistance.

Respectfully,
 (b)(6)

(b)(6)

I've added to the chain the hospital PAO, the regional health command PAO, and the Army Public Health PAO just in case they weren't looped in. (b)(5) I added

(b)(6) in case there was some messaging they have on heat illnesses/injury that could be useful.

Is Climate News a national show?

Maj. (b)(6)

Again, my thanks to you and Maj. (b)(6) for your time and patience. Acknowledging heat is a threat to military preparedness and efforts to recognize and reduce that threat are cornerstones to the story I'm researching. Your insights and description of the work being done to reduce heat illness illuminated those issues in real-time. That is so valuable to me.

I was relaying the essence of our morning conversation to a colleague and we both started thinking it would be valuable for us if we could visit the base and the hospital to see the work that's being done. What is the best – and most expedient – way to arrange a visit?

And I appreciate the links and documents you sent along.

In scanning the white paper, I noticed the reference to the "preventable death of a young officer" in 2016 as the genesis of the Heat Center. It would be appreciated if you could tell me more about that case; the circumstances surrounding the death, how it was preventable. And what would be different today both in terms of treating the officer and mitigating the threat.

And we also had discussed some elementary return to duty protocols that would give me a broad understanding of how soldiers recover from and return to duty following minor heat incidents to life-threatening heat stroke.

Again. Thank you again for your help.

Dr. (b)(6)

Thank you again for your offer of an in-person visit. We, myself and the InsideClimate News video journalist, would like to make a hospital and base visit Oct. 24, 25 and 26.

Along with talking with you and Maj. (b)(6) we'd like to see the section of the hospital/ER/Heat Center where heat illnesses are treated. It also will be important to us to talk with some soldiers who have been treated for a heat illness; and perhaps even a soldier who was forced to leave the military because of the effects of a heat illness.

I'm also hoping you can facilitate interviews and observations of base operations where heat mitigation is an element of the preparation for training. I'm thinking that would include the base weather center, any classes where soldiers are instructed on heat mitigation; observing any meetings where heat is a part of the risk assessment equation.

We'd also like to be in the field to observe some of the training, including exercises where soldiers are in full gear, and some of the safety measures that are employed to protect against heat illness.

And just to follow-up on a couple of other earlier requests, it remains important to get as many details as possible about the 2016 "preventable death of a young officer" referenced in your white paper as the genesis of the Heat Center. It would be appreciated if you could tell me more about that case; the circumstances surrounding the death, how it was preventable. And what would be different today both in terms of treating the officer and mitigating the threat.

Thank you again for your help. This gives us the in-sight necessary to explain in real, human terms the threat heat poses to individual soldiers as well as to military preparedness.

I'll be away on vacation next week, but will check in with you upon my return.

Sincerely,

Dave Hasemyer

Maj(b)(6)

Again, my thanks to you and Maj(b)(6) for your time and patience. Acknowledging heat is a threat to military preparedness and efforts to recognize and reduce that threat are cornerstones to the story I'm researching. Your insights and description of the work being done to reduce heat illness illuminated those issues in real-time. That is so valuable to me.

I was relaying the essence of our morning conversation to a colleague and we both started thinking it would be valuable for us if we could visit the base and the hospital to see the work that's being done. What is the best -- and most expedient -- way to arrange a visit?

And I appreciate the links and documents you sent along.

In scanning the white paper, I noticed the reference to the "preventable death of a young officer" in 2016 as the genesis of the Heat Center. It would be appreciated if you could tell me more about that case; the circumstances surrounding the death, how it was preventable. And what would be different today both in terms of treating the officer and mitigating the threat.

And we also had discussed some elementary return to duty protocols that would give me a broad understanding of how soldiers recover from and return to duty following minor heat incidents to life-threatening heat stroke.

Again. Thank you again for your help.

Media Engagement Summary

Martin Army Community Hospital

Date interview conducted: 5 Sept. 2018, 1210 hours

Reporter: David Hasemyer: InsideClimate News.

Interest: Martin Army Community Hospital heat injury studies

Summary: Members of the BMACH Emergency Department conducted an interview with David Hasemyer of InsideClimate News, concerning their in-depth research of how to mitigate heat related injuries. The interview began at 12:10 p.m., 5 Sept. 2018, and will be conducted telephonically. BMACH PAO specialist, (b)(6) sat in on the interview.

Specifics: Dr. (Maj.) (b)(6) and Dr. (Maj.) (b)(6) both of whom have conducted extensive research about the effects of heat related injuries and the innovative techniques of mitigating the severe effects of these injuries were interviewed by Mr. Hasemyer.

The interview began with both doctors introducing themselves and explaining their backgrounds and how they became interested in the study of heat related injuries. Both doctors explained that they arrived in 2014 (b)(6) and 2015 (b)(6), respectively. They said after seeing a very significant number of severe heat related injuries, they were motivated to research ways of mitigating these injuries.

Mr. Hasemyer asked several questions that were somewhat out of the doctors' expertise, such as how much the Army pays to train each Soldier/Ranger at Fort Benning? And, how specifically do heat injuries effect the readiness of each unit within the Army? He also asked about the weight of ruck sacks when carried in unit marches, the speed of the marches and other unit-specific questions. I told him that the doctors were not privy to that information and the units would be the best source for those answers. However, it is worth noting that Mr. Hasemeyer did seek information that I feel straddled the line between investigative reporting and fact-finding journalism.

Dr. (b)(6) pointed out that units and cadre here at Fort Benning are trained to provide immediate care to Soldiers when it is believed that they're suffering heat related injuries.

Overall, Mr. Hasemyer did not receive any information that would place the U.S. Army in a negative light. His focus was on Fort Benning's extensive research with USARIEM and their innovative techniques of mitigating heat related injuries. The article is expected to be published on the InsideClimate website in mid-November, he said.

No negative media issues to report at this time.

Attachments: Media contact summary090518.docx

Good morning,

We have a media engagement set up for noon today. Please see the attachment for specific details.

Mr. David Hasemyer of InsideClimate News has requested to interview Dr. (b)(6) and Dr. (b)(6).

This is a telephonic event. I apologize for the short notice, but It was requested late yesterday.

Note: InsideClimate News is a non-profit and non-partisan news organization, focusing on environmental journalism. The publication writes that it "covers clean energy, carbon energy, nuclear energy and environmental science—plus the territory in between where law, policy and public opinion are shaped."

 (b)(6) Office

Media contact summary

Martin Army Community Hospital

Projected Date: 5 Sept. 2018, 1200 hours

Subject: David Hasemyer: InsideClimate News.

Interest: Martin Army Community Hospital heat injury studies

Summary: Members of the BMACH Emergency Department will conduct an interview with David Hasemyer of InsideClimate News, concerning their in-depth research of how to mitigate heat related injuries. The interview is set for Noon, 5 Sept. 2018, and will be conducted telephonically. BMACH PAO specialist, (b)(6) will sit in on the interview.

Specifics: Dr. (Maj.) (b)(6) and Dr. (Capt.) (b)(6), both of whom have conducted extensive research about the effects of heat related injuries and the innovative techniques of mitigating the severe effects of these injuries will be interviewed.

Mr. Hasemyer has contacted PAO about interviewing (b)(6) and (b)(6), but the interview was actually set up by Dr. (b)(6). PAO was informed of this on Tuesday, 4 Sept. 2018. (b)(6) asked if PAO had any issues with the interview taking place. PAO (b)(6) asked to sit-in on the open mic, telephonic interview.

InsideClimate News is a non-profit and non-partisan news organization, focusing on environmental journalism. The publication writes that it "covers clean energy, carbon energy, nuclear energy and environmental science—plus the territory in between where law, policy and public opinion are shaped."

Established in 2007, the Brooklyn, New York-based website covers environmental issues. It won the 2013 Pulitzer Prize for National Reporting for its coverage of the Kalamazoo River oil spill.

Based on previous conversations, Mr. Hasemyer appears to be a soft question interviewer, and his temperament toward the military is unknown at this time. Again, PAO will monitor the interview closely.

No media issues to report at this time.

Good afternoon everyone,

David Hasemyer, a reporter from InsideClimate News, is interested in writing a story about the heat study USARIEM is doing in collaboration with BMACH. He is available Monday or Tuesday next week, so if you are all interested, I need to confirm our availability ASAP. He and I just spoke on the phone, so I'll tell you what he wants, and I'll provide you additional info on the media source:

STORY FOCUS: Mr. Hasemyer is interested in finding out 1.) how heat affects military performance and training, 2.) what we are doing about it, and 3.) why we are doing this study.

MEDIA BACKGROUND: InsideClimate News is a Pulitzer prize-winning non-profit news organization dedicated to covering climate change, energy and the environment. They are generally trustworthy for information, and they always source to highly credible media and science outlets.

(b)(5)

Please let me know by Monday morning if you support this interview. Thanks for your help!
